# TimeSync Protocol on CAN
## Final release planned for R25-11

| Problem | Solution |
|---|---|
| Time Synchronization over CAN protocol is specified in context of AUTOSAR SWS CanTSyn. In order to fulfill the AUTOSAR design rules and to improve the reusability of the protocol under the associate partner light license the content shall be separated. | Extract the pure protocol specification from the SWS and move it to a protocol specification document in Foundation. |

**Enables the use of the protocol specification under the Associate Partner Light License**
**Reduces risks of having incompatible solutions for Tsync on CAN**
